

REAL EARTH MINERALS AND NATURAL RESOURCES

DESCRIPTION

The REMNR Token is an issuer-defined digital instrument structured to represent defined economic participation in real-world mineral, natural-resource, and extractive-sector assets, including but not limited to mineral reserves, resource production rights, off-take agreements, processing outputs, royalties, or other issuer-specified resource-linked value. The issuer determines the scope and classification of the underlying resource assets, the applicable valuation or reference framework, the cash-flow or entitlement mechanics, and all transfer, custody, or redemption conditions. REMNR is designed to operate as a compliant, contract-based vehicle for structuring, allocating, and managing economic interests associated with earth-resource and national-resource activities within applicable legal and jurisdictional frameworks.

USAGE

The REMNR Token is used by resource developers, mining operators, government counterparties, and commodity financiers to fund, monetize, or allocate economic interests in mineral and natural-resource assets. For example, a REMNR issuance may be used to finance exploration or extraction activities, allocate participation in production royalties, or structure interests tied to long-term off-take or supply agreements for critical minerals or natural resources. This allows earth-resource-linked value to be packaged, administered, and transacted in a compliant, contract-based format under issuer-defined terms.
