

I.SHOP2

DESCRIPTION

The SHOP Token (i.SHOP2) is an issuer-defined digital instrument designed to support and monetize participation in next-generation retail, e-commerce, and digital-merchant ecosystems. The underlying asset framework may include merchant-processing receivables, platform service fees, advertising or placement revenues, loyalty-commerce flows, or other issuer-specified commercial assets generated within the i.SHOP2 retail network. The issuer establishes the asset composition, the revenue-distribution mechanics, and all applicable transfer or redemption conditions, enabling SHOP to function as a compliant, contract-based vehicle for allocating and transacting value derived from integrated retail and digital-commerce operations.

USAGE

The SHOP Token is used by retailers, e-commerce platforms, digital merchants, and commerce network operators to monetize transaction activity and platform participation within integrated retail ecosystems. For example, a SHOP issuance may be used to finance merchant onboarding, allocate interests in processing receivables or platform service fees, or structure participation in advertising placements and loyalty-commerce programs across the i.SHOP2 network. This allows retail and digital-commerce value to be packaged and transferred in a compliant, contract-based format.
